

Create Clean with Rugged Industrial Cleaning Equipment

**World-First Dust Containment
Technology for Construction
and High-Dust Applications**

TF95-TRS Vacuum-Sweeper with Bag-In-Bin System

A rugged pedestrian vacuum-sweeper with world-first, patent-pending dust containment technology specifically designed for construction sites and other high-dust applications – the Bag-In-Bin system. Reducing exposure to harmful respirable dusts when emptying the hopper, using a fully sealable solution to protect the long-term health of operators.

Features:

- Unique, patent-pending Bag-In-Bin system to reduce exposure to harmful respirable dust while emptying the machine's dirt container.
- The 2.5m² filter and high airflow volume deliver outstanding dust control in the harshest of environments for perfect sweeping results each time, every time.
- Direct drive side brooms and oversized wheels make this a machine of choice for rugged industrial environments.
- Fast access to main brooms and side brushes make inspection and servicing simple.
- Clear and logical operator controls minimize training requirements and enhance operator confidence.

Exposure to harmful respirable dust continues to be an issue directly related to the long-term health of operators – with the Bag-In-Bin system, we can contain, seal and dispose of dangerous dusts to eliminate the peak levels of exposure when cleaning, to Create Clean on your site and Protect the Health of your workforce.
