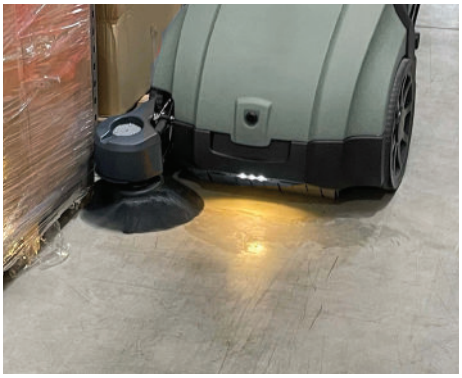
TF75-TRS Pedestrian Vacuum-Sweeper

A tough pedestrian vacuum-sweeper with active dust control, the TF75-TRS is German-designed and German-made specifically for high-dust applications including construction sites, brickworks, foundries and warehousing.

Both fine dust and large, heavy debris is handled with ease thanks to the Tandem Roller Sweep system which delivers double the cleaning power of alternative sweepers, with simple rocker-switch controls making for intuitive and easy operation. The TF75 brings even sharper maneuverability, a super long run-time of up to 4 hours and the ability to fit through a standard internal doorway without even trying!



Extremely powerful dust extraction, M-Class or HEPA filter options and serious cleaning muscle from the Tandem Roller Sweep system combine to make the TF75 a sweeper for the optimal removal of fine and coarse dirt in the industrial sector – quickly, thoroughly and easily.

The mechanical filter developed for the TF75-TRS sweeper even cleans deep rib areas reliably and eliminates up to 45% more dust from the filter ribs than conventional cleaning mechanisms, ensuring the dirt, debris and dust are all collected, contained, trapped, and prevented from escaping into the air, or onto the ground again.

Features

- **The 1m2 filter and high airflow volume** deliver outstanding dust control in the harshest of environments for perfect sweeping results each time, every time.
- **Clear and logical operator controls** minimize training requirements and enhance operator confidence.
- **Unique TRS (Tandem Roller Sweep) system** utilises two centre brooms to grab up debris from the floor, delivering double the sweeping power of alternative machines.
- **Direct drive side brooms and oversized wheels** make this a machine of choice for rugged industrial environments.
- **Fast access to main brooms and side brushes** make inspection and servicing simple.

Specifications

- 2,800m2/hr theoretical productivity
- 600mm cleaning path
- 40ltr dirt hopper capacity
- Dimensions (L/W/H): 1030mm/700mm/640mm
- 72kg weight including battery
- Up to 4 hours of run time per charge
